

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

In the year 1904, 15,405 births were registered in the State, including still-births (14,082 in 1892, 14,604 in 1893, 14,607 in 1894, 15,430 in 1895, 15,429 in 1896, 15,142 in 1897, 15,121 in 1898, 14,475 in 1899, 14,709 in 1900, 14,615 in 1901, 15,166 in 1902, and 15,130 in 1903).

The number of living children born was 14,673, and the number of still-births was 732.

Of the whole number of living children of which the sex was certified 7,482 were males and 7,177 were females. In 14 births the sex was not stated. For each 100 girls born there were 104.2 boys (106.7 in 1892, 107.4 in 1893, 104.7 in 1894, 106.4 in 1895, 105.3 in 1896, 102.3 in 1897 106.0 in 1898, 104.4 in 1899, 103.2 in 1900, 105.6 in 1901, 105.0 in 1902, and 105.3 in 1903).

*Birth-rate.*—The birth-rate of living children for the State was 21.13 for each 1,000 of population.

Table No. 13 shows the number of births in each city with the birth-rate of each. The average birth-rate in the cities per 1,000 population was 21.48 as compared with 20.96, the birth-rate of the rest of the State.

The birth-rate of the different counties varied widely. As it invariably has been every year since the registration began, it was the highest in Aroostook, 37.27, and the lowest in Waldo, 13.19. In four counties, Aroostook, Oxford, Washington, and York, the birth-rate was above that of the whole State. The birth-rate in each county is shown in Tables No. 4 and 8.

*Parentage.*—Of the total births in the State, 60.58 per cent. were of native parents; 20.29 per cent. were of foreign parentage; 17.96 per cent. were of parents one of whom was foreign; while of 1.17 per cent. the nationality was not stated.

Waldo county had the largest percentage of native-born parents, to wit, 93.10 per cent. and only 1.88 per cent. in which both parents were foreign-born. Lincoln followed with 90.28 per cent. of native parentage, and only 1.74 per cent. in which both parents were foreign-born.

In Hancock county in 88.06 per cent. of the births the parents were native-born and in 3.45 per cent. foreign-born.

In Knox, the percentage of native-born parents was 77.43; in Somerset, 68.61; in Franklin, 67.82, and in Piscataquis, 67.35.

Comparatively high percentages of foreign-born parents are found in Androscoggin county 32.86; in Cumberland, 29.64; in Franklin, 20.21; in Kennebec, 21.21; in Oxford, 21.37, and in York, 34.28 per cent.

The percentages of parentage, whether American-born or foreign-born, may be found for the other counties in Table No. 14.

Comparing the percentage of the births in our twenty cities with that of the rest of the State, we find that, in the cities, 44.23 per cent. of the births were of American parentage, while in the rural parts of the State, the percentage of American-born children was 68.61.

The largest percentage of foreign-born parents was in Biddeford, 65.12; and in Westbrook, 41.94.

In Ellsworth there were no foreign births, and in Belfast only 2.5 per cent. of the births had both parents foreign-born. For further comparison see Table No. 15.

*Seasons and Births.*—The largest number of births in any one month in 1904 was 1,367 in March; the smallest was 1,037 in November; the largest quarterly total was 3,847 in the second quarter; the smallest, 3,311 in the last quarter. The three consecutive months in which the largest number of births occurred were March, April, and May, 4,028.

The following is a tabular statement of the number of births in each month of the thirteen years 1892-1904.

## NOTES ON MARRIAGES.

The number of marriages registered in the State during the year 1904 was 6,208 (5,726 in 1892, 5,795 in 1893, 5,594 in 1894, 5,729 in 1895, 5,579 in 1896, 5,331 in 1897, 5,144 in 1898, 5,329 in 1899, 5,482 in 1900, 5,735 in 1901, 5,905 in 1902, and 6,200 in 1903). We have, therefore, for the year 1904, a marriage-rate of 17.88 (persons married) to every 1,000 of population, or at the rate of 8.94 marriage per 1,000 persons.

• *Marriage-rates.*—The marriage-rate was higher in Aroostook county than elsewhere in the State, it being for that county 20.52 per 1,000. The lowest marriage-rate, that of 12.74 per 1,000, was in Waldo county. See Table No. 4.

*Nativity.*—Of the 6,178 records of marriage in which there was a statement of birthplace, in 72 per cent. the groom and bride were both American; in 10 per cent. both were of foreign birth; in 8 per cent. the groom was American and the bride of foreign birth; while in 10 per cent. a foreign groom and American bride were united.

*Seasons.*—The largest number of marriages, 829, was solemnized in June, while the smallest number in any one month, 331, occurred in March. See Table No. 22.

*Ages of the Married.*—The largest number, both of grooms and brides, was between 20 and 25 years of age. While still under 15 years of age, 12 brides were married; in the age period 15-20 years there were 232 grooms and 1,640 brides; in the period 20-25 years 2,314 men and 2,348 women were married; from 25-30, 1,699 men and 1,066 women; from 30-35, 804 men and 467 women; from 35-40, 427 men and 239 women; from 40-45, 223 men and 163 women; from 45-50, 184 men and 108 women; from 50-55, 118 men and 55 women; from 55-60, 80 men and 43 women; from 60-70, 101 men and 51 women; from 70-80, 21 men and 9 women; over 80, one man. The age of 4 grooms and 7 brides was not stated. See Table No. 24.

In 5,192 marriages, the groom was older than the bride; while in 1,016, the bride was the elder; 769 widowers and 588 widows were remarried; 251 men and 340 women were remarried after having been divorced from a former marriage.

Table No. 25 exhibits the fact that 5,181 men and 5,268 women were married the first time; that 902 men and 838 women were married the second time; that 105 men and 86 women were united in the third marriage; that 13 men and 3 women contracted marriage a fourth time; 1 man was married a fifth time. The oldest groom was 83 years of age, and the oldest bride was 74. In two marriages the bride was but 13 years of age and in ten but 14.

In one instance a groom was married a third time when but 24 years of age, and a bride a third time when only 19. One man was married for the first time at the age of 68 years; one woman contracted marriage the first time at the age of 74 years, and another at 72. A second marriage of one bride occurred at 17 years of age and another at 18. Both had been divorced. In one marriage the groom was 58 and the bride only 15.

The number of deaths for this registration year was, therefore, 337 more than for 1903, 673 more than for 1902, 213 more than for 1901, 43 less than for the year 1900, 24 less than for 1899, 390 more than for 1898, 110 more than for 1897, 720 more than for 1896, 882 more than for 1895, 334 more than for 1894, 212 more than for 1893, 801 less than for 1892. The death-rate for the State for the year 1904 was 16.34 for every 1,000 of population (18.37 in 1892, 16.84 in 1893, 16.66 in 1894, 15.83 in 1895, 16.07 in 1896, 16.99 in 1897, 16.57 in 1898, 16.45 in 1899, 16.40 in 1900, 16.03 in 1901, 15.37 in 1902 and 15.85 in 1903).

By referring to Table No. 4, it will be seen that the death-rate of Washington county was lower than that of any other county, being only 12.96. The counties Androscoggin, Aroostook, Hancock, Knox, Lincoln, Piscataquis, Sagadahoc, Waldo and Washington had lower death-rates than that of the whole State; while the counties Cumberland, Franklin, Kennebec, Oxford, Penobscot, Somerset and York had death-rates larger than that of the State. The highest county death-rate was that of Kennebec, 18.37.

The death-rate in the cities was 18.00 (20.46 in 1892, 19.89 in 1893, 19.65 in 1894, 18.36 in 1895, 18.78 in 1896, 20.11 in 1897, 19.74 in 1898, 18.10 in 1899, 18.34 in 1900, 17.90 in 1901, 17.03 in 1902, and 17.16 in 1903), as compared with that of the rest of the State with the cities omitted, which death-rate was 15.54 (17.46 in 1892, 15.54 in 1893, 15.39 in 1894, 14.77 in 1895, 14.93 in 1896, 15.68 in 1897, 15.24 in 1898, 15.52 in 1899, 15.47 in 1900, 15.13 in 1901, 14.58 in 1902, 13.39 in 1903).

*Seasons and Mortality.*—The largest number of deaths occurred in April, 1,116. The smallest number of death in any one month was 800 in July. During the spring months 3,234 deaths occurred; during the summer, 2,503; during the autumn,

2,633; in the winter, 2,964. The following shows the month in which the largest and smallest number of deaths occurred in the years 1892-1904:

Table No. 29 exhibits the total number of deaths which occurred in each month of the years 1897-1904. The number of deaths for 1904 in each month by counties is shown in Table No. 35.

*Sex and Mortality.*—Of the 11,346 decedents, 5,868 were males and 5,468 were females. The sex of ten was unstated.

Among children dying before they were 5 years old, 1,135 were males and 894 were females; there were 241 more deaths among boys under 5 years of age than among girls within the same age-period. On the contrary, at the age-periods from 10 to 50 years there was a preponderance of deaths among females, while there were more deaths among males at the ages from 50 to 80, and from 80 to 100, more among females. At the age of 100 years, 1 woman died. See Table No. 35.

*Age and Mortality.*—The following shows the number of deaths which occurred within each age-period, and the relation which the percentage in each period bears to the whole number of deaths:

Under 1 year of age	1,455	12.82 per cent.
From 1-5 years of age	581	5.12 per cent.
From 5-10 years of age	196	1.72 per cent.
From 10-20 years of age	504	4.44 per cent.
From 20-30 years of age	874	7.71 per cent.
From 30-40 years of age	740	6.52 per cent.
From 40-50 years of age	755	6.65 per cent.
From 50-60 years of age	1,077	9.49 per cent.
From 60-70 years of age	1,564	13.78 per cent.
From 70-80 years of age	1,957	17.25 per cent.
From 80-90 years of age	1,335	11.77 per cent.
From 90-100 years of age	239	2.11 per cent.
Over 100 years of age	1	0.01 per cent.
Ages not stated	68	0.61 per cent.

*The Causes of Death.*—The following table shows the mortality from ten prominent causes in the eight years 1897-1904. The various diseases of the brain have occupied the first place among the causes of death, and consumption was the next most prominent cause until 1898 when it was reduced to the third place in the list; in 1899 and 1900 it occupied the fourth place; in 1901, the third place; in 1902, and in 1903 the fourth place, which it still keeps this year. Diseases of the heart have the second place, and pneumonia has the third place.

By referring to Table No. 30 it will be noticed that the causes of death are arranged by counties under fourteen classes. The following notes on some of the classes and individual causes of death will be arranged in accordance with the classification shown in this Table No. 30.

*Infectious Diseases.*—The lists of the infectious diseases usually include smallpox, measles, scarlet fever, typhoid fever, whooping cough, diphtheria and croup. The following table shows the number of deaths which resulted from these diseases in the several counties of the State:

*Typhoid Fever.*—There were 242 deaths from typhoid fever. Of these 136 were males and 106 were females. As indicative of the loss which the State incurs from typhoid fever, it is well to bear in mind that the age distribution of the decedents shows that the deaths from this disease are principally among those active and productive age-periods when human life is of the most value; 82 per cent. died between 10 and 50 years of age.

*Age:* Under 1, 1; 1-5, 4; 5-10, 9; 10-20, 57; 20-30, 86; 30-40, 34; 40-50, 22; 50-60, 12; 60-70, 10; 70-80, 4; not stated, 8.

The largest number of deaths, 49, occurred in April, and the smallest number, 9, in January. By quarters, 39 were in the first quarter, 111 in the second, 52 in the third, and 40 in the last quarter of the year.

The typhoid death-rate of 5.51 in the cities is considerably greater than that in the villages and rural towns, which is 2.51. The rate for the State is 3.48.

The following exhibits the number of deaths from typhoid fever in each county, by months, with death-rate in each county:

*Malarial Diseases.*—Thirteen deaths were registered as due to malarial diseases. In eleven cases the disease was contracted outside of this State; nine of these persons having contracted the disease in the war of the rebellion. All of the decedents were males; their respective ages were: 1-5, 1; 50-60, 1; 60-70, 9; 70-80, 2.

*Tuberculosis.*—In 1904, tuberculosis in its various forms was the cause of 1,217 deaths (1,513 in 1892; 1,446 in 1893; 1,449 in 1894; 1,397 in 1895; 1,359 in 1896; 1,338 in 1897; 1,239 in 1898; 1,241 in 1899; 1,215 in 1900; 1,250 in 1901; 1,165 in 1902, and 1,076 in 1903). The death-rate per 10,000 from this cause was 17.52.

*Cerebral Tuberculosis. (Tubercular Meningitis.)*—The number of deaths was 63; 31 were of males and 32 of females.

The number for the cities was 22. The death-rate for the State was 0.91; for the cities, 0.98.

*Ages:* Under 1, 18; 1-5, 15; 5-10, 18; 10-20, 7; 20-30, 8; 30-40, 8; 40-50, 2; over 60, 1; not stated, 1.

*Pulmonary Tuberculosis.* (Consumption.)—From this cause 1,016 deaths were registered in 1904, which is equivalent to a death-rate of 14.63 per 10,000 of population. The death-rate for the cities was 16.40. The following is a tabular arrangement of the number of deaths in the State from pulmonary tuberculosis in each of the thirteen registration years, together with the death-rate from consumption for each year:

	Number of deaths.	Death-rate per 10,000.
1892.....	1,352.....	20.24
1893.....	1,299.....	19.35
1894.....	1,262.....	18.80
1895.....	1,195.....	17.71
1896.....	1,172.....	17.21
1897.....	1,128.....	16.47
1898.....	1,021.....	14.85

1901.....	1,033.....	14.87
1902.....	970.....	13.97
1903.....	901.....	12.97
1904.....	1,016.....	14.63

There were in 1904, 336 fewer deaths than in 1892, 283 fewer than in 1893, 246 fewer than in 1894, 179 fewer than in 1895, 156 fewer than in 1896, 112 fewer than in 1897, 5 fewer than in 1898, 1 more than in 1899, 11 fewer than in 1900, 17 fewer than in 1901, 46 more than in 1902, and 115 more than in 1903.

*Ages:* Under 1, 19; 1-5, 11; 5-10, 10; 10-20, 109; 20-30, 307; 30-40, 196; 40-50, 184; 50-60, 94; 60-70, 79; 70-80, 45; over 80, 10; not stated, 2.

It is thus shown in this report, as it was in the twelve preceding reports, that the smallest number of deaths occurred at the age-period 5-10 years, and that, of the decedents whose ages were given, 82 per cent. died at those ages when their deaths entailed the greatest loss to the State.

As to the sex, 447 of the decedents, or 44.0 per cent., were males; and 569, or 56.0 per cent. were females.

The following table shows the number of deaths in each county by months, with the death-rate from consumption in each county:

*Diabetes.*—The deaths from this cause numbered 91 (55 in 1892, 65 in 1893, 71 in 1894, 77 in 1895, 67 in 1896, 95 in 1897, 88 in 1898, 95 in 1899, 74 in 1900, 87 in 1901, 83 in 1902, and 92 in 1903). The special death-rate from diabetes was, therefore, 1.31 in 1904. Forty-nine of the decedents were males and 42 were females.

**Ages:** 1-5, 8; 5-10, 2; 10-20, 8; 20-30, 8; 30-40, 2; 40-50, 5; 50-60, 18; 60-70, 24; 70-80, 18; 80-90, 8.

*Old Age.*—There were registered 756 deaths as due to old age, 334 men and 422 women. Of these decedents, 6 were from 60 to 70 years of age; 185 were from 70 to 80; 433 were from 80 to 90; 129 were from 90 to 100, while 1 was over 100 years old; and the ages of 2 were unknown.

From Table No. 35, however, it will be seen that the whole number of persons who died at the ages between 70 and 100 years or more was 3,532 (3,801 in 1892, 3,147 in 1893, 3,242 in 1894, 2,897 in 1895, 3,045 in 1896, 3,232 in 1897, 3,109 in 1898, 3,378 in 1899, 3,355 in 1900, 3,332 in 1901, 3,289 in 1902, and 3,404 in 1903), or one death in every three and one-fifth was of a person who was between 70 and 100 years of age or older. Assuming that all these 3,532 died of old age, the death-rate from old age would be 50.86 among every 10,000 living at all ages.

The following shows the number of deaths in each county of persons 70 years of age and over, and the number of their deaths in each 10,000 of the population at all ages:

Among the persons whose decease occurred in 1904, only 1, a woman attained the age of 100 years. Her name was Margaret Thibedaux, and she died in Bradley, November 12th, at the age of 100 years. She was born in Madawaska. Her father, whose name was Webber, was a native of Canada, as was also her mother, whose maiden name was not given.

*Diseases of the Nervous System and of Organs of Special Sense.*—The number of deaths registered under the causes included in this group was 1,578 (1,459 in 1892, 1,451 in 1893, 1,543 in 1894, 1,585 in 1895, 1,520 in 1896, 1,661 in 1897, 1,607 in 1898, 1,728 in 1899, 1,652 in 1900, 1,615 in 1901, 1,600 in 1902, and 1,641 in 1903), or 22.72 to every 10,000 of population.

*Inflammation of the Brain or Membranes.*—The number of deaths was 212 (236 in 1892, 263 in 1893, 286 in 1894, 261 in 1895, 242 in 1896, 327 in 1897, 272 in 1898, 273 in 1899, 251 in 1900, 264 in 1901, 211 in 1902, and 243 in 1903), 109 males and 103 females. Of these 116 were in the cities. The death-rate from the several diseases grouped under this head was 3.05.

**Ages:** Under 1, 88; 1-5, 66; 5-10, 12; 10-20, 19; 20-40, 16; 40-60, 18; over 60, 9.

*Apoplexy.*—From this cause 714 deaths occurred (488 in 1892, 422 in 1893, 408 in 1894, 488 in 1895, 492 in 1896, 555 in 1897, 558 in 1898, 629 in 1899, 583 in 1900, 595 in 1901, 674 in 1902, and 712 in 1903), 365 males and 349 females. Of these, 258 were in the cities. The State's death-rate from apoplexy was, therefore, 10.28; that of the cities, 11.47.

The largest number of deaths from apoplexy, 202, occurred in the winter; the largest number in any one month was 72 in February.

In 1894, 1896, and 1900, the greatest mortality from this cause occurred in the spring; in 1892, 1893, 1895, 1897, 1899, and 1901, in the winter; in 1898, in the winter and spring; in 1902, in the summer, and in 1903 in the winter.

Conversely, the smallest number of deaths, 45, was in August; the smallest number in any one season was 149 in the summer months. Over 74 per cent. of the deaths were of persons 60 years of age and upward.
